ANACONDA.
Advanced Installation Options
Customize how Anaconda3 integrates with Windows
Create shortcuts (supported packages only).
Add installation to my PATH environment variable
NOT recommended. This can lead to conflicts with other applications. Instead, use the Command Prompt and PowerShell menus added to the Windows Start Menu.
Register Anaconda3 as my default Python 3.14
Allows other programs, such as VSCode, PyCharm, etc. to automatically detect Anaconda3 as the primary Python 3.14 on the system.
Clear the package cache upon completion
Recommended. Recovers some disk space without harming functionality.

Anaconda
Quick Start
Environments
Jump into pre-configured environments by project or industry. Clean dependencies, faster development

Documentation

Anaconda Blog

All applications on base (root) Channels

and AI/ML professionals. Supercharged with an AI-enhanced IDE experience. Free forever, plus one month of Pro included.

Install

JupyterLab supercharged with a suite of Anaconda extensions, starting with the Anaconda Assistant AI chatbot.

Install

Anaconda. Launch a preconfigured environment with hundreds of packages and store project files with persistent cloud storage.

Launch

anaconda_prompt

1.1.1

Opens a terminal instance with conda activated (requires menuinst 2.1.1 or greater).

Launch

JupyterLab

4.5.9

An extensible environment for interactive and reproducible computing, based on the Jupyter Notebook and Architecture.

Launch

Notebook

7.5.7

Web-based, interactive computing notebook environment. Edit and run human-readable docs while describing the data analysis.

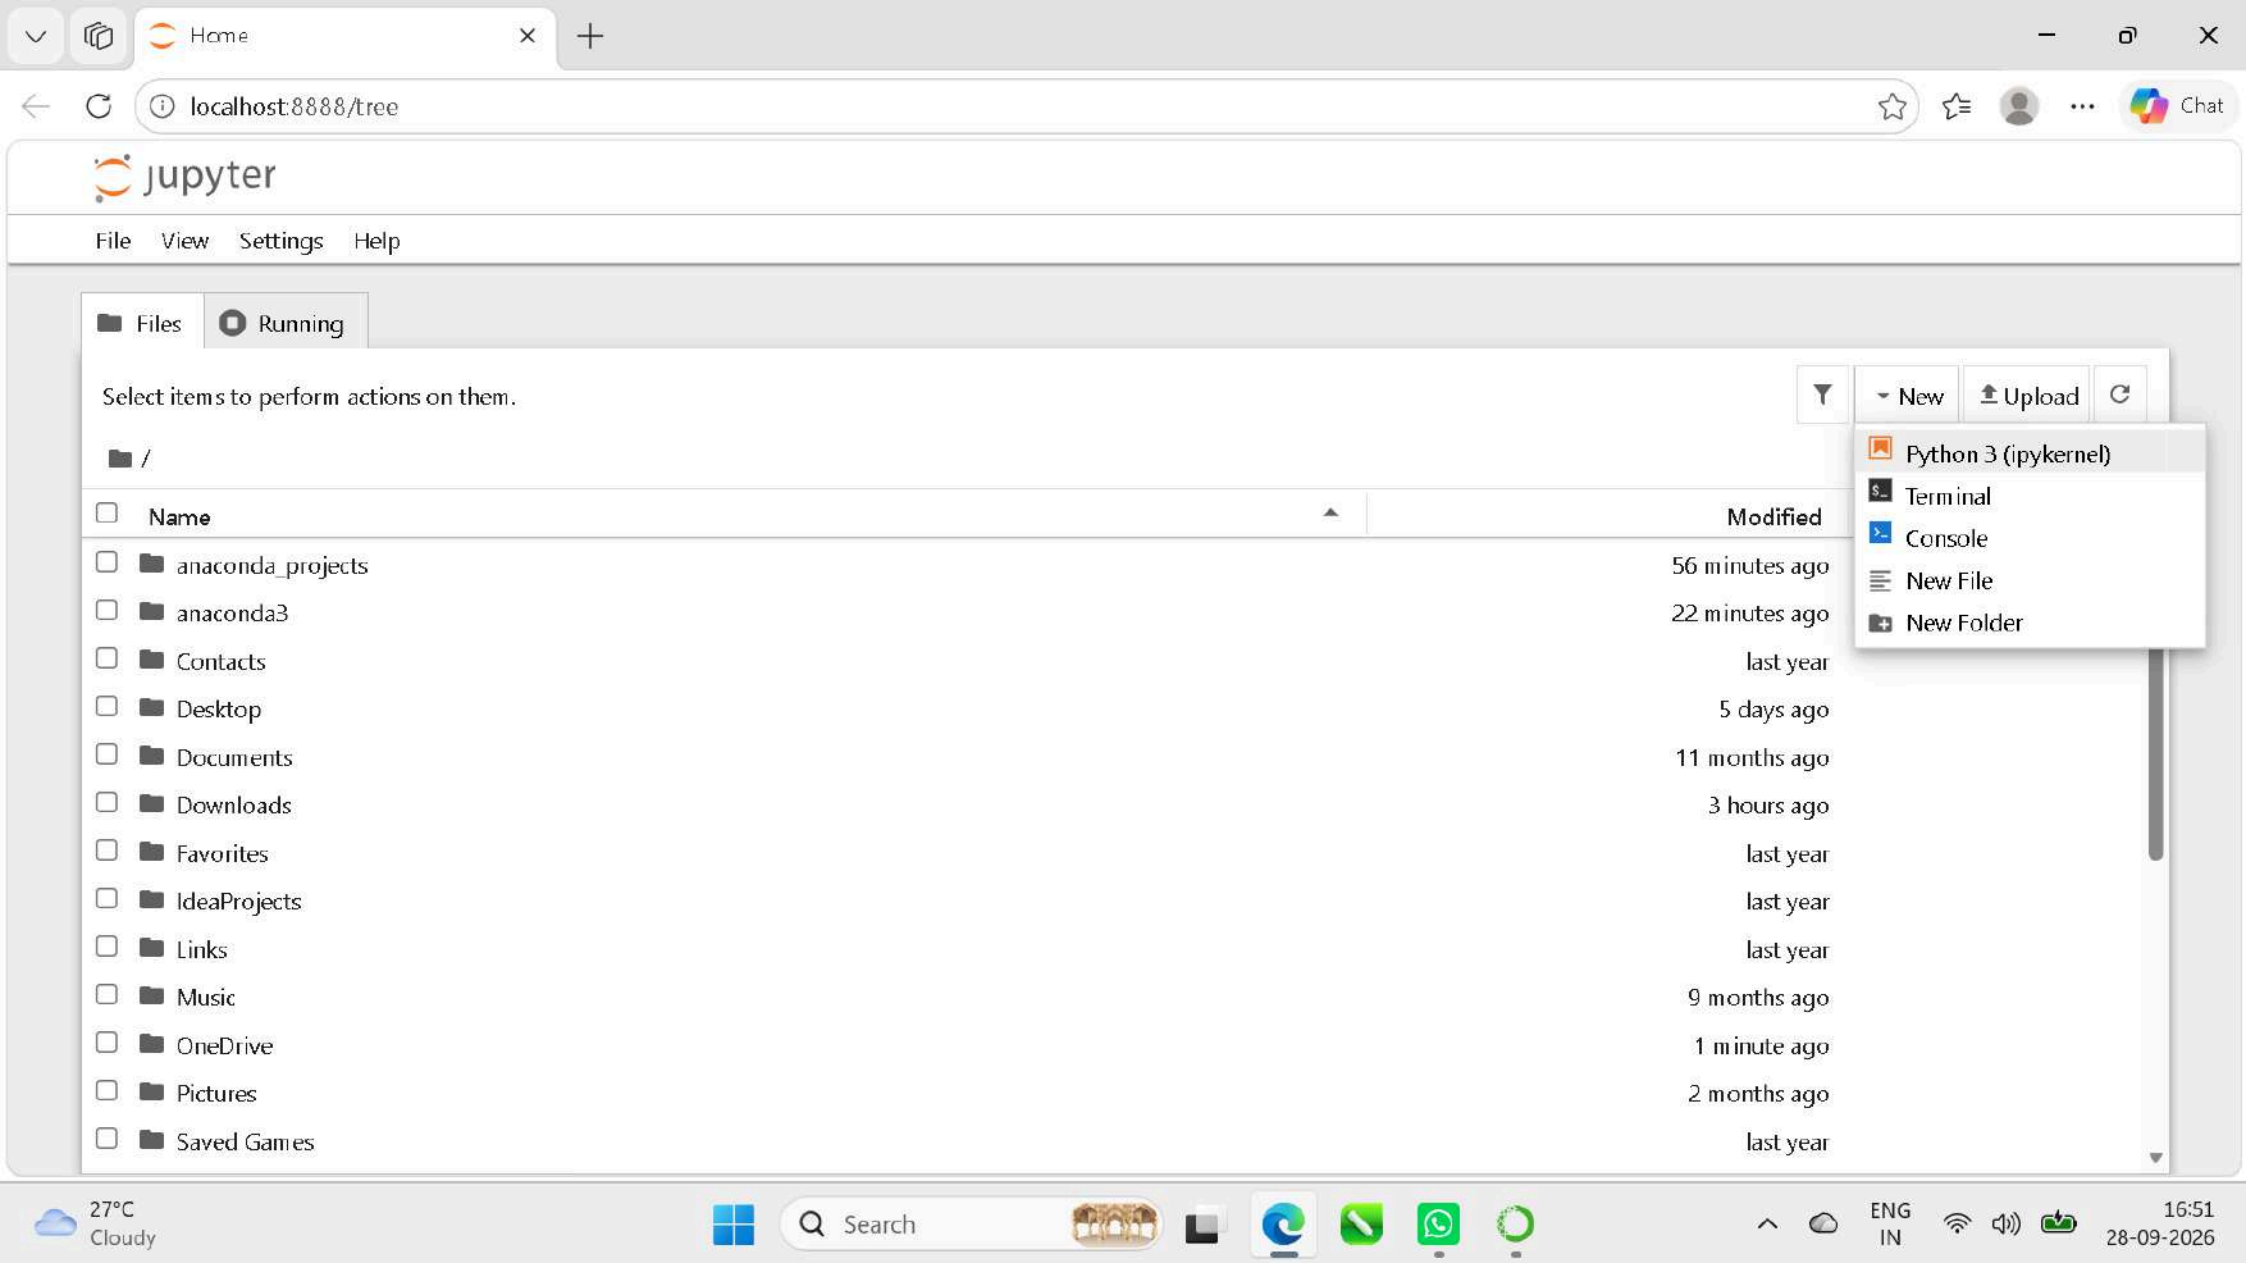

Launch

File:

https://drive.google.com/drive/folders/1igrXz1uVF2hpvojZMhNsqa6wsCqznHfN?usp=drive_link

Report:

All 3 submission tasks were completed:

a) Anaconda Installation: Downloaded Anaconda (Python 3.x version) from the official website and installed it successfully using 'Just Me' option with default settings.

b) Jupyter Notebook Execution: Launched Anaconda Navigator from Start Menu, then launched Jupyter Notebook. Created a new notebook with Python 3 kernel and renamed it to FirstProgram.ipynb.

c) First Python Program: Executed the following code in a cell using Shift+Enter:

- print("Hello World")
- print("Welcome to Machine Learning Lab")
- Practiced basic operations like adding cells, using Markdown cells, saving, and restarting kernel.

4. Output

Program executed successfully and displayed:

- Hello World
- Welcome to Machine Learning Lab
- Screenshots of installation and notebook output were captured.

5. Conclusion

- Anaconda was installed successfully and Jupyter Notebook interface was understood. The first Python program was created and executed without errors.
